

## SmartEdit 8.1 Release Notes

(Note: Smart Edit 8.1 requires your Casablanca system to have at least 256 MB of RAM.)

### FIXES

- Support for two-line text now available again in DVD Arabesk.
- HD scenes have a correct date.
- It is now possible to play out HD projects from Kron, Prestige (and Claro) systems to Canon HV10 (to) HV30 Camcorders.
- Video Spice Rack is supported again.
- Audio timeline has been optimized.
- Clipboard display in single analog monitor mode has been adjusted.
- Smaller improvements have been added.
- Updated translations have been included.
- Versions for Liberty and Claro will follow shortly.

### KNOWN ISSUES OF 8.1

- When using the single monitor VGA mode on some Casablanca models, video playback may appear to play too fast. This does not occur in dual VGA mode or single video monitor mode.
- During Single VGA monitor mode, there is no video signal visible when using analog input for video recordings.
- There is no sound in Audio/Record Edit menu when the input is set for DV.
- When using the Audio envelope feature, there will not be a playback from an area near highlighted key points. You can only play from the beginning a created envelope sample.
- When working with Countdown, the option for the Shadow Blur in "Style" is not working.
- USB sticks may not be recognized in the System Settings "Backup/restore Archives" function.

### IN HDV PROJECTS:

- DVD's created from HDV edited Material exhibits a line of distortion at the bottom of the screen in under scan. We recommend using a masking filter to cover the production before adding it into Arabesk to make a DVD. (This distortion is not seen in HDV tape export.)
- Photo Mode in the Record menu does not function in an HDV project
